

Mozambican Banks

Healthy margins and lower provisions boost net profit

Improved economic environment, despite higher inflation

The Mozambican banking sector faced an improvement in domestic economic growth in 2022. However, a lot of uncertainties on the international front, namely related to geopolitical factors and persistently high inflation levels, also impacted the domestic economy and activity in the sector. Real GDP growth accelerated to 4.1% in the period from 2.3% in 2021 thanks to stronger growth in several key sectors of the economy, including agriculture and fishing, mining, transport and communication and retail. On the other hand, annual inflation in the country continued to rise, reaching double-digit figures in the second half of the year for the first time since the end of 2017. This led the Banco de Moçambique to continue to raise its benchmark interest rate on two occasions for a total of 400bps, with the MIMO rate currently standing at 17.25%. The reserve requirements at the central bank were left unchanged during 2022. However, already in 2023, they were significantly increased in order to try to absorb the excess liquidity in the banking system, which tends to generate some inflationary pressures.

Revenues lifted by higher net interest income

The combined profit and loss account of the six largest banks in the country showed a strong improvement in net profit (44.6% YoY) in 2022, reaching MZM 23,404 million (US\$ 366 million). This net profit represents a ROE of 19.4% and a ROA of 3.36%. The evolution in net profit continued to reflect the favorable impact of higher interest rates on margins from customer loans and profitability from debt instruments. It also reflected a sharp fall in loan provisions (-61.9% YoY), especially from the reversal of impairments at BCI and the large drop in provisions at Moza. Overall, the combined operating income of these banks advanced 17.3% YoY, with revenues rising 11.5% YoY and costs 5.8% YoY, with the latter staying well below the average inflation rate of 10.91% recorded in the country in 2022. The cost performance of the sector largely reflected a higher increase in staff costs (roughly half of the total cost base) than in the previous year. This was due to the stabilization of the metical exchange rate, as an important part of these costs is linked to foreign currency. This meant that the combined cost-to-income ratio of the six largest banks improved to 47.7% from 50.3% in 2021.

The combined NPL ratio of the largest banks remains elevated

Balance sheet data showed that total net loans remained roughly unchanged from the previous year. In part, this reflects the higher interest rate environment in the country, which led to a lower demand for credit and a more prudent lending policy approach by the main players in the sector. On the other hand, deposits rose 7.5% YoY in the period and clearly remained the main funding source of these banks, as they accounted for 93.9% of their total liabilities. All in all, the loans-to-deposits ratio declined further and reached a level below 40% for the first time in 2022. Other data showed that the combined NPL ratio of these banks continued to deteriorate, increasing to 10.92% from 10.19% in the previous year. We note that the NPL ratio remains well above the 5% benchmark ratio and thus lowering this ratio remains a challenge for Mozambican banks, also when compared with the NPL ratios witnessed in other countries in Sub-Saharan Africa. Our estimates indicate that the combined solvency ratio of the six banks remained well above the required 14% after standing at 27.3% in 2022 (up from 25.6% in the previous year). Also, liquid assets (including cash and balances at the central bank and other credit institutions as well as financial assets) represented more than 63% of total assets.

ECONOMIC OVERVIEW

Economic activity in Mozambique accelerated to 4.1% in 2022, with real GDP growth in the country standing in line with the average growth recorded in Sub-Saharan Africa. This is an improvement from the 2.3% recovery witnessed in the previous year following a contraction of -1.2% in 2020. It is worth noting that the year 2020 marked the first recession that the country witnessed since 1992. Yet, the Mozambican economy was still able to perform relatively better than the average of Sub-Saharan Africa, as the region saw a contraction of -1.7% in the period.

Real GDP growth accelerated to 4.1% in 2022 from an expansion of 2.3% in the previous year

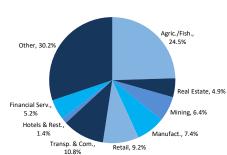

The improved economic performance last year was mostly thanks to stronger growth in several key sectors of the economy. These sectors included agriculture and fishing (growth of 4.4%), mining (10.6%), transport and communication (9.4%) and retail (2.9%). These are the largest sectors of the Mozambican economy, as demonstrated in the chart below.

The improved economic performance was thanks to stronger growth in several key sectors of the economy

REAL GDP GROWTH (2013-22)

GDP STRUCTURE (2022)

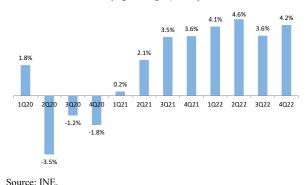

Sources: INE and IMF. Source: INE.

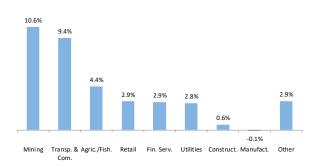

Data from INE also showed that real GDP growth improved during all quarters of 2022 when compared with their homologous period. This was particularly felt in the first half of the year, as the Mozambican economy was still recovering in the early parts of 2021 from the recession of the previous year. As seen in the graph below, economic activity grew by 4.1%, 4.6%, 3.6% and 4.2% in homologous terms in each of the four quarters, respectively. We highlight the sharp improvement in the mining industry and the transport and communication sector.

Economic growth improved during all quarters of 2022 when compared with their homologous period

REAL GDP GROWTH (1Q20 - 4Q22; YOY)

Source: INE.

Other data released by INE showed that annual inflation in the country continued to increase in 2022, reaching double-digit figures in the second half of the year for the first time since the end of 2017. Annual inflation reached a peak of practically 13% in August 2022 and eventually declined to 10.91% in December. This evolution reflected mostly the impact in domestic prices from the volatility in energy and food costs at the international level, considering the prolonged war in the Ukraine. The annual inflation figure at end-2022 compares with 7.15% in December 2021. Moreover, the 12-month average inflation rate reached 10.28% in December 2022, up from 6.41% in the previous year.

Annual inflation continued to increase in 2022, reaching double-digit figures for the first time since the end of 2017

In terms of components, the evolution of annual inflation continued to mostly reflect the increase in the prices of food and non-alcoholic beverages, with this accounting for by far the largest share

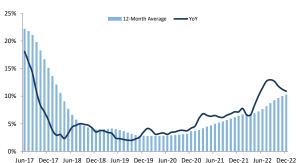

Apart from higher food costs, inflation also

of the annual increase. Annual inflation was also impacted by the increase in the prices of administered goods, in particular some types of urban transportation.

increased on the back of higher transport costs

Meanwhile, the Banco de Moçambique continued to follow a more restrictive monetary policy in 2022 following the shift in policy that had already taken place in the previous year. In 2021, the central bank increased the interbank reference lending rate (MIMO) just once and by 300 basis points (bps) to 13.25% in January. This decision was based on the substantial revision in the medium-term inflation outlook, which resulted from the continued depreciation of the metical and its possible pass-through effect on domestic prices. The reference deposit rate (FPD) and the lending rate (FPC) were lifted by the same amount to 10.25% and 16.25%, respectively, and the mandatory reserves in local currency were kept at 11.50% and foreign currency at 34.50%.

The central bank shifted monetary policy and decided to increase interest rates at the beginning of 2021 after a significant revision in its inflation outlook

The central bank decided to raise interest rates on two occasions, and by 200bps each time, in 2022. In the March meeting, the Banco de Moçambique raised the MIMO rate to 15.25%, the FPD rate to 12.25% and the FPC to 18.25%. This decision resulted from the significant upward revision of the short and medium-term inflation outlook following the deterioration of some risks, in particular the escalation of the geopolitical conflict in Europe and the natural disasters in the center and northern parts of Mozambique. According to the central bank, the increase in interest rates aimed to contain inflation in the short and medium-term in order to allow the start of the gradual transition process to single-digit interest rates in the medium to long-term in the context of resuming an assistance program with the IMF and the execution of the natural gas projects in the country.

Interest rates were lifted on two different occasions in 2022 for a combined increase of 400bp

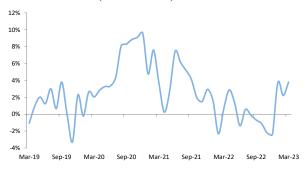

Then, in the September meeting, the Banco de Moçambique lifted the MIMO rate to 17.25%. The decision aimed to ensure the return of inflation to single digits in the medium-term in a backdrop where the volatility in energy and food prices at the international level was likely to persist and potentially impact and lead to a sustained increase in prices domestically. The other key interest rates were also increased by the same amount, with the FPD standing at 14.25% and the FPC at 20.25%, while the mandatory reserves were left unchanged.

The MIMO rate was lifted to 17.25% in September 2022, the level that it currently stands at

central bank decided to raise the mandatory reserves in local currency from 10.5% to 28.0% and the reserves in foreign currency from 11.5% to 28.5%. And, in May, these were raised to 39.0% and 39.5%, respectively. These decisions aimed to absorb the excess liquidity in the banking system, which tends to generate some inflationary pressures.

reserves in both local and foreign currency twice in 2023 to try to absorb the excess liquidity in the banking system

BANKING SECTOR OVERVIEW

The Mozambican banking sector included 15 banks operating in the country at the end of 2022. None of these banks is listed and most of them are units of foreign lenders or controlled by overseas investors, as described in the table below. The financial system also comprised 12 smaller lenders (micro-banks), four credit cooperative and five financing institutions, including two financing societies and three foreign exchange institutions.

The banking sector includes 15 banks

| | Start of Operations | Majority Shareholder |
|------------------------------------|---------------------|----------------------------------|
| Standard Bank Moçambique | 1967 | Standard Bank (South Africa) |

(1) Previously Mauritius Commercial Bank (Moçambique); (2) Ecobank bought Banco ProCredit in June 2014; (3) Banco Terra merged with Moza Banco in August 2019; (4) Previously Banco Único.

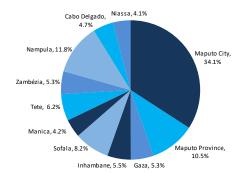

According to the latest available information disclosed by the central bank, the branch network of the banking sector consisted of 658 branches at the end of 2022. As expected, these branches were more concentrated around the city of Maputo (34.1% of the total), Nampula (11.8%), the province of Maputo (10.5%) and Sofala (8.2%). As for the banks themselves, Banco Comercial e de Investimento (BCI) led with a market share of 32.0% in terms of the total branches of the banking sector, followed by Millennium bim (29.9%), Moza Banco (9.6%), Absa Bank Moçambique (7.4%) and Standard Bank Moçambique (6.1%).

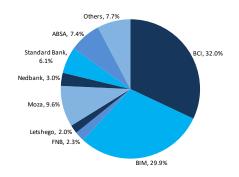

The branch network is more concentrated around Maputo, while BCI is the bank with the largest market share

The three banks more systemically important for the country's financial system include BCI, Millennium bim and Standard Bank Moçambique, representing about 65%, 56% and 69% of the total assets, loans and deposits of the sector, respectively, at the end of 2022. Absa Bank Moçambique, Moza Banco and Nedbank Moçambique also stand out, but they are clearly smaller

The six largest banks represent about 80-85% of the total assets, loans and deposits of the sector

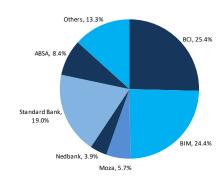

than the other three players. Overall, the six banks represent about 80-85% of the sector's total assets, loans and deposits.

The Mozambican financial system has become increasingly more developed over the years, with a larger presence and a more relevant role of the banking sector in the domestic economy. That said, local banks still evidence a conservative approach, namely in terms of their lending policies, as demonstrated by the persistently low ratio of loans as a percentage of GDP detailed in the table below.

The banking sector has played a bigger role in the local economy

There has also been an increase in financial inclusion levels, reflected in a larger number of clients that now have access to a bank account, more available banking products, as well as a greater and wider presence of the branch network in the country. The latest available data provided by the central bank indicates that (1) more than 30% of the country's adult population had a bank account in 2022 (vs. 23.9% in 2013), (2) the number of branches per 100,000 adults stood at 4.3 in the period, with 79.4% of the districts of the country having at least one bank branch (vs. 49.2% in 2013) and (3) growth in the number of ATMs and POSs per 100,000 adults has slowed in the last 2-3 years following a significant increase in the previous years.

There has also been a clear increase in financial inclusion levels over the

We detail in the table below some of the key financial inclusion indicators of the sector in the period 2013-22.

| FINANCIAL INCLUSION INDICATORS | | | | | | | | | | |
|---|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|

OVERVIEW OF 2022 RESULTS

In this report, we look at the 2022 financial accounts of the six largest banks operating in the country and extrapolate these figures to try to analyze the main trends for the sector. We think the combined accounts of these banks provide a fairly accurate picture of the performance of the sector considering that they represent a significant share of the banking sector.

We analyze the 2022 results of the six largest banks operating in Mozambique

We break down our report into two sections. First, we look at the main balance sheet and profit and loss account numbers on a combined basis. We also present the key ratios for both financial statements. Second, we look at each of the six banks individually in more detail and analyze their 2021 accounts separately. In the annex, we provide several tables and graphs comparing the key figures and indicators for these banks.

We look at the figures both on a combined and individual basis

BALANCE SHEET

The combined net assets of the six banks reached MZM 697,497 million (US\$ 10,921 million) in 2022, rising 6.3% from the previous year. This evolution reflects a higher amount in terms of balances at other credit institutions (+36.1% YoY), which more than offset the 16.5% YoY decline in the amount of cash and balances at the central bank in the period. We also note that the total amount of financial assets in the balance sheet rose 2.6% from the previous year and accounted for 24.6% of total assets.

Total net assets for the six largest banks rose 6.3% Yo Y in 2022

Moreover, total net loans stood practically unchanged at MZM 207,359 million (US\$ 3,247 million) and continued to represent the largest share of total assets (29.7%). This compares with about 32% of total assets in the previous two years and a markedly higher figure of 35-40% of total assets during the period 2017-19. This performance in recent years is justified by the current economic backdrop and higher interest rate environment in the country, which has affected customer demand for bank loans.

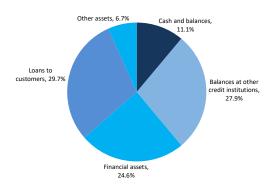

Net loans represented less than 30% of total assets in 2022

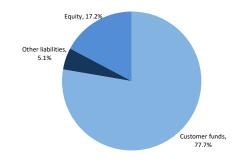

On the other hand, deposits increased 7.5% YoY to MZM 541,949 million (US\$ 8,485 million) and accounted for by far the largest share of the total liabilities and equity of the six banks at 77.7%. Total equity rose a modest 3.6% in the period and accounted for 17.2% of the total, as shown below.

Customer deposits remained by far the largest funding source of the banking sector

BREAKDOWN OF TOTAL ASSETS (2022)

BREAKDOWN OF TOTAL LIABILITIES AND EQUITY (2022)

Sources: Annual Reports and Eaglestone Securities.

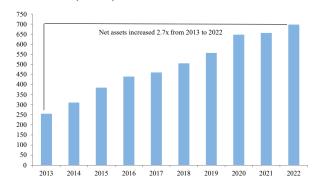

Sources: Annual Reports and Eaglestone Securities.

Overall, the combined net assets of the six banks have gradually increased in the last decade, reaching a level that is 2.7 times higher in 2022 than in 2013. As stated above, nearly a third of the assets of these banks are net loans, with the large majority being loans denominated in local currency. In 2022, the amount of loans denominated in meticais stood almost unchanged from the previous year and represented 78.6% of the total loan portfolio of these banks. Foreign currency loans recovered 4.7% YoY after a sharp decline in 2021 and represented 21.4% of total loans. This evolution partly reflects the fact that the metical remained stable against the dollar and appreciated against the rand and the euro in 2022 thanks to the restrictive monetary policy followed by the central bank.

The combined net assets of the six banks were 2.7x larger in 2022 than in 2013

NET ASSETS (2013-22) - BILLION MZM

LOANS BY TYPE OF CURRENCY (2013-22)

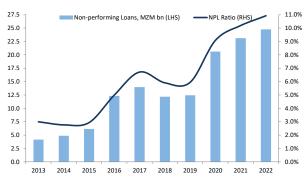

Sources: Annual Reports and Eaglestone Securities.

Other data suggest that loan loss provisions in the balance sheet remained at a more modest level than in the period 2016-18, as these represented 8.60% of total gross loans in 2022. This compares with 9.12% in 2021. The higher provisioning levels in recent years reflect the deterioration in asset quality ratios, particularly since 2016, and a more prudent approach from the banking sector in the current economic environment.

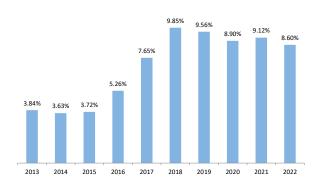

Provisions in the balance sheet remained at a more modest level after rising significantly during 2016-18

ASSET QUALITY INDICATORS (2013-22)

BAL. SHEET PROVISIONS (% OF GROSS LOANS) (2013-22)

Sources: Annual Reports and Eaglestone Securities.

The combined NPL ratio of the six banks continued to deteriorate in 2022, reaching 10.92% in the period (from 10.19% in the previous year). NPLs rose 7.1% YoY in absolute terms after increasing 12.3% YoY in the previous year. The NPL coverage ratio (measured by provisions over NPLs) fell to 78.7% from 89.6% in 2021.

Meanwhile, the total deposits of these six banks reached MZM 541,949 million (US\$ 8,485 million) after rising 7.5% YoY in 2022. Deposits in meticais rose 9.0% YoY and accounted for 74.2% of the total deposit base, while deposits in foreign currency recovered 3.5% YoY after falling 5.9% YoY in the previous year largely as a result of the appreciation of the metical in the period. Sight deposits were up 7.0% YoY and represented 61.5% of total deposits, a figure that is in line with the one recorded in the previous year.

The NPL ratio deteriorated to 10.92%, while coverage fell to 78.7%

Deposits increased 7.5% YoY in 2022, with deposits in meticais rising 9.0% and deposits in foreign currency recovering 3.5% after the fall in the previous year

All in all, this means that the combined loans-to-deposits ratio stood at 38.3%, which compares with 40.9% in 2021. We note that this ratio has gradually declined in recent years, falling below the 50%-level for the first time in 2018. Also, according to our estimates, the combined solvency ratio of the six banks improved to 27.3% in 2022 (from 25.6% in the previous year), standing well above the regulatory requirement of 14% imposed by the Banco de Moçambique for banks operating in the country.

PROFIT AND LOSS ACCOUNT

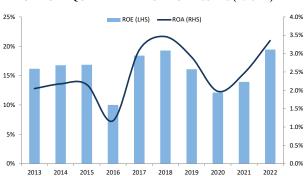

The combined profit and loss account of the six banks showed that their total net profit surged 44.6% YoY to MZM 23,404 million (US\$ 366 million) in 2022. This evolution was largely due to an improved operating performance in the period and a sharp drop in net loan impairments. Overall, this bottom-line figure represents a return-on-equity (ROE) of 19.4% and a return-on-assets (ROA) of 3.36%.

The combined net profit of the six banks surged 44.6% Yo Y in 2022

Sources: Annual Reports and Eaglestone Securities.

Total revenues for these banks stood at MZM 70,499 million (US\$ 1,104 million), representing an increase of 11.5% YoY. This evolution was thanks to another robust performance in net interest income (+17.2% YoY), which continued to benefit from the favorable impact on margins from a higher interest rate environment in the period and the improved profitability in financial assets held by the banking sector. Recall that the central bank increased its benchmark MIMO interest rate by a total of 400bps in the year to try to contain inflationary pressures.

Revenues benefited from higher interest rates and an improved economic environment

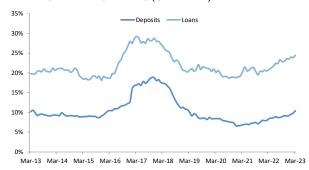

The higher interest rate environment was reflected in some banking sector indicators, including net interest margin, which is the ratio of net interest income over average total assets. According to our calculations, this ratio improved to 7.95% in 2022 from 7.05% in the previous year. The contribution of net interest income to total banking revenues reached 76.3% (vs. 72.7% in 2021).

Net interest income accounted for 76.3% of total banking income

Fees and commissions saw a mixed performance across these six banks. However, they remained unchanged on a combined basis from the previous year, representing less than 12% of their total revenues. Some banks mentioned that they continued to see greater utilization of their digital channels, while others benefited from an increase in their client base. Some players also said that their fee income was impacted by the persistently challenging macro environment in the country, some regulatory restrictions and the competitive backdrop in the market.

The combined amount of fees and commissions of the six banks remained unchanged from the previous year

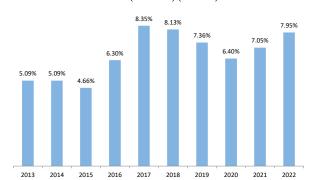

Other banking income declined 6.6% YoY on a combined basis and represented 11.9% of total revenues. As explained below, this evolution was due to a sharp drop recorded by BCI as a result

Other banking income fell as a result of the sharp decline recorded by BCI

of extraordinary losses that the bank had following the demand from the central bank that it returned some commissions as well as some corrections in taxes from past years.

NET INTEREST MARGIN (NII/ATA) (2013-22)

REVENUE BREAKDOWN (2013-22)

Sources: Annual Reports and Eaglestone Securities.

Meanwhile, total costs reached MZM 33,643 million (US\$ 527 million) in 2022, up 5.8% YoY. This compares with an average inflation rate of 10.91% recorded in the country last year. We note that the total number of branches and employees for the six banks stood almost unchanged from the previous year, standing at 582 branches (-2) and 8,530 employees (+114) at the end of 2022.

Total costs rose 5.8% YoY, significantly lower than the average inflation rate recorded in the year

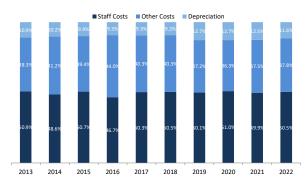

The cost performance of the sector largely reflected a much faster increase in staff costs (7.0% YoY) than in the previous year (3.3% YoY). This evolution was due to the stabilization of the metical exchange rate in the period, as an important part of these costs is linked to foreign currency. We also note that staff costs continued to represent about half of the total costs of the six banks.

The cost performance of the sector reflected a much faster increase in staff costs than in the previous year

COST BREAKDOWN (2013-22)

Sources: Annual Reports and Eaglestone Securities.

Sources: Annual Reports and Eaglestone Securities.

In terms of efficiency ratios, the improved revenue performance and the moderate cost increase in the period meant that the cost-to-income ratio continued to decline, reaching 47.7% (vs. 50.3% in 2021). Moreover, total costs per employee and total costs per branch increased 5.6% and 6.1%, respectively.

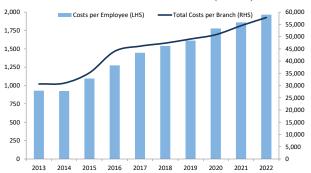

The cost-to-income ratio continued to improve, standing at 47.7% (from 50.3% in the previous year)

Sources: Annual Reports and Eaglestone Securities.

Below the operating income line, net loan loss provisions fell sharply in the period after the significant increases recorded in previous years. As explained below, this was due to a reversal in loan impairments at BCI as well as a sharp drop at Moza Banco. Overall, the total cost-of-risk (measured by the ratio of impairments over loans) declined to 126bps (from 332bps in 2021).

Loan impairments fell sharply by 61.9% YoY, with cost of risk standing at 126bps

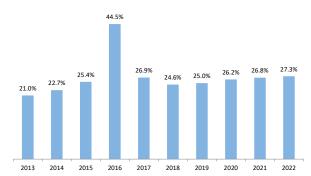

Finally, the total effective tax rate for the six banks stood at 27.3% in the period, a level that has remained relatively stable in recent years, as demonstrated in the graph below.

The effective tax rate has remained relatively stable in recent years

BANCO COMERCIAL E DE INVESTIMENTOS (BCI)

BCI disclosed a net profit of MZM 8,122 million (US\$ 127.2 million) in 2022, rising 55.7% from the previous year. This evolution was largely due to a reversal in provisions in the period and a nearly double-digit increase in the bank's operating performance. Overall, this meant that BCI reported a ROE of 28.9% and a ROA of 4.01%, which compares with 22.2% and 2.78%, respectively, in 2021.

BCI's net profit showed a strong increase as a result of a reversal in provisions and an improved operating performance

The operating income performance reflected a relatively more favorable evolution in terms of revenues (+7.7% YoY) than costs (+5.0% YoY) in the period. Net interest income saw another strong increase thanks to the favorable impact of higher interest rates on margins in a backdrop of lower loan growth. Income from financial assets also saw a sharp improvement on the back of the increase in this portfolio, namely in treasury bills and notes, which also benefited from higher interest rates. Commissions fell in the period while other banking income also declined sharply. The latter was due to extraordinary losses following the demand from the central bank that BCI returned some commissions from the period April 2018 through end-2021 as well as some corrections in taxes from past years. Meanwhile, total costs were up a modest 5.0% YoY, significantly lower than the average inflation rate (10.91%) in the year. This allowed for an improvement in the cost-to-income ratio to 42.3% (from 43.4% in 2021). In 2022, BCI booked a total of MZM 778.3 million in loan impairments and other net provisions, which corresponds to a reduction of 80.1% YoY. This sharp decline was due to (1) the anticipation of some provisions in 2021 to consider a more challenging macro environment, (2) the reversal of impairments in a specific large loan and (3) the reversal of provisions for other assets.

Revenues benefitted from a larger contribution from net interest income while costs advanced at a pace below the inflation rate

Net loans declined by -4.4% YoY, reflecting the more prudent approach of the banking sector and the higher interest rate environment. Deposits recovered 8.4% YoY after falling in the previous year, which means that the loans-to-deposits ratio fell for the first time below 40%. The NPL ratio continued to deteriorate and reached 14.43% while NPL coverage stood at 74.3%. Finally, BCI reported a solvency ratio of 27.4% (vs. 23.1% in 2021).

The loans-to-deposits ratio fell for the first time below

SHAREHOLDER STRUCTURE - 2022

MILLENNIUM BIM (BIM)

Millennium bim (BIM) reported a net profit of MZM6,646 million (US\$104.1 million) in 2022, a slight improvement of 2.9% YoY. This reflects another double-digit increase in operating income (10.1%), which more than offset higher loan impairments (67.7%) made considering the persistently complex economic environment and taxes (42.0%). Overall, this means that ROE and ROA reached 18.8% and 3.45%, respectively.

BIM's net profit increased 2.9% YoY thanks to another double-digit improvement in the bank's operating performance

BIM saw an improvement in revenues across the board. Net interest income was up 9.9% YoY thanks to the favorable impact of higher interest rates on income from loans to customers and from financial assets. Fee income rose 7.1% YoY on the back of the higher contribution from digital channels that saw an increase in new customers and the number of transactions. Other banking income increased 2.8% YoY due to the stronger results from financial operations, namely the larger volume of FX transactions. Meanwhile, total costs increased 7.2% YoY, still below the inflation rate for the year, with staff rising only 5.2% and accounting for 41.6% of the total cost base. The increase in other costs and depreciation is related to the investments in the IT platform that the bank has done in recent years to improve digitalization levels. All in all, this means that the cost-to-income ratio improved slightly to 42.9% (from 43.5% in 2021).

Revenues improved across the board while total costs increased 7.2% YoY, below the inflation rate

As for the balance sheet, net loans recovered slightly (2.3% YoY) from the fall recorded in the previous year, as the increase in loans in meticais more than offset another sharp fall in foreign currency denominated loans. Deposits increased 10.2% YoY thanks to the recovery in sight deposits, which means that the loans-to-deposits ratio fell below the 30% level (28.1% vs. 30.3% in 2021). Most of the loans (94.6%) and deposits (80.6%) were denominated in local currency while 49.5% were sight deposits. Meanwhile, the NPL ratio stood almost unchanged at 7.78%, with coverage standing at 104.2% (vs. 7.96% and 104.8%, respectively, in 2021). Finally, the bank's solvency ratio stood at a comfortable 36.4% (vs. 44.8% in 2021).

Net loans recovered slightly after the fall in the previous year while deposits rose more than 10% YoY, leading the transformation ratio to stand below 30% for the period

STANDARD BANK MOÇAMBIQUE

Standard Bank Moçambique's net profit jumped 38.4% YoY to MZM 6,846 million (US\$ 107 million) in 2022 after a 9.0% YoY decline recorded in the previous year. This recovery in the bottom line resulted mostly from a strong revenue performance (21.1% YoY), especially in net interest income. Overall, ROE reached 19.6% and ROA stood at 4.34% (vs. 15.7% and 3.44%, respectively, in 2021).

Net profit jumped 38.4% YoY following a strong revenue performance in the period

Net interest income rose 27.7% YoY thanks to the higher interest rate environment, as stronger income from loans more than offset higher costs from deposits. This strong improvement in net interest income meant that it represented 74.3% of total revenues in the period. Commissions were up a modest 4.9% YoY while other banking income (+5.5% YoY) was impacted by the slower activity in terms of FX transactions. Meanwhile, costs were up 8.4% YoY, with this increase representing the large investments that the bank is currently undertaking in its digital platforms as well as its employees. Indeed, staff costs rose 13.8% YoY and represented 55.6% of the total cost base. Following this healthy revenue performance, this means that the cost-to-income ratio improved to 46.0% (from 51.4% in 2021).

Net interest income rose 27.7% YoY thanks to the higher interest rate environment

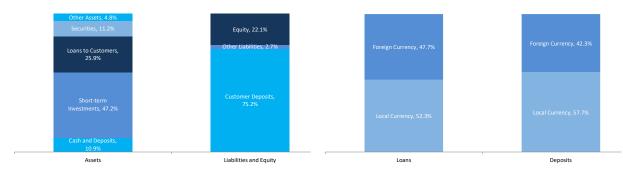

In terms of the balance sheet, net loans stood flat in the period after the healthy growth in the previous two years. The bank stated that there was an increase in the number of early loan reimbursements since several of its clients looked to reposition their balance sheets in order to take advantage of a stable exchange rate and opted for relatively cheaper loans in foreign currency. This explains why the bank's portfolio in local currency recorded a sharp decline of 23.6% YoY. On the other hand, deposits recovered 8.6% YoY after the decline in the previous year. This means that the loans-to-deposits ratio fell to 34.5% (from 37.3% in 2021). Moreover, the NPL ratio saw another sharp increase, reaching 6.02%, while NPL coverage fell sharply to 98.3%. Finally, the solvency ratio improved to 26.2%, which compares with 22.2% in 2021.

The NPL ratio rose to 4.85% (from 2.62% in the previous year)

ABSA BANK MOÇAMBIQUE

Absa Bank Moçambique's net profit saw another strong improvement (61.4% YoY), reaching MZM 1,023 million (US\$ 16.0 million) in 2022 after the bank more than doubled its bottom line in the previous year. This evolution was thanks to a strong operating performance (44.9% YoY) that more than offset the impact from higher loan provisions and taxes. ROE reached only 11.3% and ROA 1.55%, which is relatively low when compared with the other larger banks.

The bank's net profit saw another strong increase in 2022

Total revenues rose 17.7% YoY after a robust increase of 29.0% YoY in net interest income in the period. This evolution was thanks to a sharp increase of 74.4% in revenues from interest on other assets. The bank said that net income from loans fell 2.7% since deposits are structurally aligned with the central bank's key interest rate and are subject to a quicker repricing than the loan portfolio. Net interest income was also impacted by the fact that customers changed their current accounts toward time deposits in the expectation of a change in the economic cycle. In terms of other revenues, fee income fell 34.2% partly as a result of accounting reclassifications in some income classes and the slower activity observed in the financing of commerce activity. Other banking income increased moderately (6.7%) and reflected the contribution of trading income. Total costs rose 5.4% YoY, with staff costs advancing 10.4% and representing 40.5% of the total cost base of the bank. This means that the efficiency ratio improved to 61.8% (from 68.9% in the previous year). Below the operating income line, we note that the bank saw another sharp increase in loan impairments (25.4%). This was mostly due to the continued increase in the bank's loan portfolio and the impact that higher interest rates are having on the ability of clients to pay their loans.

Net profit benefited from a rather strong operating performance that more than offset higher loan impairments and taxes

Net loans continued to advance at a healthy pace and allowed ABSA to continue to gain market share (10.3% vs. 9.4% in 2020). Deposits stayed flat in the period after surging 43.9% YoY in the previous year. This means the Loans/Deposits ratio increased to 51.0% (vs. 47.6% in 2021). We also note that the NPL ratio increased markedly from 10.83% in 2021 to 14.78% last year, with coverage falling to 42.1%. Finally, the solvency ratio stood at 20.0% (vs. 19.2% in 2021).

Absa continued to gain market share in loans

SHAREHOLDER STRUCTURE - 2022

MOZA BANCO

Moza Banco reported a net profit of MZM 90 million (US\$ 1.4 million) in 2022. This compares with a net loss of MZM -1,381 million (US\$ -21.6 million) in the previous year. The bottom-line performance reflected a sharp fall of 72.1% YoY in loan impairments after the bank booked MZM 2,933 million of loan provisions in the previous year. The bank stated then that these were due to the need to cover the risk exposure of some loans, including from the potential impact from Covid-19 related risks, and for already overdue loans. Moza Banco also saw a significant decline of 29.5% YoY in its operating performance in 2022.

Moza Banco recorded a small net profit in 2022 after a sharp fall in loan impairments in the period

Revenues declined 8.8% YoY with net interest income falling 7.0% because of higher financing costs that resulted from the increase in the MIMO rate by the central bank in the period. The higher interest rate environment also led to slower loan growth, with customer loans falling 1.4% YoY. Fees saw another healthy performance (rising 10.4% YoY) thanks to the improved activity in volumes and transactions in the channels and services provided by the bank. On the other hand, other banking income recorded a fall of nearly 42% YoY as a result of the reversal of MZM 306 million of the gains obtained in 2021 from the FX repricing of leasing liabilities in foreign currency. In terms of costs, these were up by a modest 3.2% YoY, with staff costs rising 2.3% and accounting for 60.1% of the total cost base. Overall, Moza Banco's cost-to-income ratio deteriorated to 71.7% (vs. 63.3% in 2021), remaining the highest amongst the largest banks operating in the country.

The bank saw a decline of 29.5% YoY in its operating income

Balance sheet data also showed a recovery in deposits in the period, with these remaining by far the largest funding source of the bank as deposits accounted for 90.3% of total liabilities. This meant that the loans-to-deposits ratio of the bank fell to 61.5% (from 67.4% in the previous year). Also worth noting is the deterioration in the NPL ratio (from 14.4% to 15.5% in 2022), with NPL coverage standing at 77.2% (vs. 74.3% in 2021). Finally, the solvency ratio reached 22.6%, down from 23.2% in the previous year.

Moza's NPL ratio remains the highest amongst the largest banks operating in the country

SHAREHOLDER STRUCTURE - 2022

NEDBANK MOCAMBIQUE

Nedbank Moçambique disclosed a net profit of MZM 677 million (US\$ 10.6 million) in 2022, more than doubling its bottom-line figure from the previous year. This sharp improvement was due to the bank's strong operating performance, which rose 95.4% YoY. This more than offset the impact of higher loan impairments and other provisions, as they combined rose more than 90% from the previous year. Overall, this means that ROE reached 14.8% and ROA 2.18%. This compares with 8.0% and 1.00%, respectively, in 2021.

Nedbank Moçambique reported a net profit of MZM 677 million in 2022, more than double the figure recorded in the previous year

Revenues (22.5% YoY) improved across the board, especially net interest income (27.5% YoY) that benefited from the growth in the bank's loan portfolio (10.5% YoY) and the increase in interest rates in the year. Commissions were up 4.1% YoY, despite the persistently challenging macro environment in the country and some regulatory restrictions, which combined with a competitive backdrop in the market, has put great pressure on the fee income. Other banking income advanced 13.9% YoY thanks to the favorable impacts from the greater commercial dynamism of the bank and the stability of the metical. Meanwhile, total costs fell 2.4% YoY, with an important part of this decline being justified by the investment that the bank made in 2021 with its rebranding and the update of part of its IT structure. Staff costs declined 3.6% YoY as a result of the continued exit of several employees during the year (-6.2%). All in all, this meant that the cost-to-income ratio saw a sharp improvement to 59.3% (from 74.5% in 2021).

The bank saw a significant improvement in its operating performance

In terms of the balance sheet, the bank continued to see a decline in deposits (-3.5% YoY), which combined with the double-digit growth in loans led the loans-to-deposits ratio to increase to 49.5% (vs. 43.3% in the previous year). Also worth noting is that the bank's NPL ratio remained at an impressive 2.21%, while NPL coverage reached 296%. These figures compare with 2.32% and 312%, respectively, in the previous year. This means that Nedbank's asset quality ratios remain by far the best amongst the largest banks operating in the country. Finally, the bank's solvency ratio increased from 14.9% to 21.5% in the period.

Nedbank's asset quality ratios remain the best in terms of the largest banks operating in the country

Disclosures

Eaglestone was founded in December 2011 with the aim to be a committed partner for the development of businesses located primarily in Sub-Saharan Africa and to support the development of renewable energy projects on a global basis.

The company has three business activities - financial advisory services, asset management and brokerage - and currently has offices in Amsterdam, Cape Town London, Lisbon, Luanda and Maputo

Eaglestone is committed to operating and behaving according to the highest standards of corporate governance. Its subsidiary in the United Kingdom is authorized and regulated by the Financial Conduct Authority.

Eaglestone operates with a clear vision and mission to act on behalf of and in the best interests of all its stakeholders, whether they are investors, employees or users of its services.
